

# Contract for the supply of electricity and other services.

## Particular Terms and Conditions for the Electric Vehicle Plan

### Financial terms and conditions

The regulatory charge associated with the mechanism for financing the subsidised rate established by Royal Decree-Law 6/2022 (fixed marketing cost of €0,006281549) will be added to the prices.

The price of the power term and promotional and non-promotional periods will remain unchanged for 12 months from the contracting of this Plan, although subject to updating as per the changes in the CPI (\*) on 1 January of subsequent years for the duration of the contract.

Any changes will be applied in the form of an increase or decrease in the tariffs and access fees, levies and regulated securities subject to approval by Management to be applied throughout the duration of the Contract, based on Royal Decree 3/2020 and RD 148/2021. In compliance with the foregoing, when contributions are made to the National Fund for the Sustainability of the Electricity System (FNSSE) for units of energy supplied to the Customer, the corresponding indirect costs will be passed on.

In order to apply the variations in the regulated elements to the contract prices, the current initial REE profile corresponding to the access tariff for the supply toll will be used, applying the variations in the elements in this profile and applying this to the contract pricing periods.

Eligibility for the service is subject to having a smart meter that is effectively integrated into the system and remotely controlled. If such a meter is not available, the Night Plan is automatically activated. If, at any time, your Distributor does not send us the load curve for a specific period, billing will be based on the average profile published by Red Eléctrica de España (REE).

If you are already registered for the Voluntary Price for Small Consumers (PVPC) with a registered Retailer and do not receive the subsidised rate, please be advised that, even if you meet the requirements, it will not be applied if you take out the new contract.

The energy billed is a result of multiplying the promotional or non-promotional price by the power consumed during the corresponding period. The following time ranges will apply to each period (promotional or non-promotional):

- Non-promotional timeframe: consumption from 07.00 a.m. to 00.59 a.m. every day of the year.
- Promotional timeframe: consumption made from 01.00 a.m. to 6.59 a.m. every day of the year.

The power billed will be the sum of the contracted power in each hourly period multiplied by the price of the corresponding power term. It will be prorated for the number of days comprising the billing period. If applicable, excess power will be billed in accordance with Article 9.4 of Circular 3/2020.

If applicable, reactive energy will be billed at the price of the billing term for reactive energy as established in Circular 3/2020

If your chosen plan does not suit your needs, you can switch to a new plan at any time.

Signing up for this plan is conditional on having activated a subscription to E-billing for the duration of the contract.

We also remind you that you have signed up for energy with Guarantee of Origin certification by the Spanish National Markets and Competition Commission (CNMC), which comes exclusively from energy sources certified as 100% renewable that avoid CO2 emissions

The Electric Vehicle Plan is conditioned to: 1. Have an energy consumption of at least 40% in the non-promoted period, during each billing period. If this requirement is not met, the non-promoted price will be applied to 40% of total consumption and the promoted price to the remaining 60%. If your hourly load curve for a specific period is not received from your Distributor, 40% of the consumption will be billed at the non-promoted price and the remaining 60% at the promoted price. 2. Have a smart meter effectively integrated into the System and remotely managed. If you do not have said counter, the Stable Plan will be automatically activated. 3. Have the Electronic Invoice activated during the entire duration of the contract.

## Duration of the contract

The contractual term is 12 months from the supply start date.

The supply start date is conditional on the existence of an access contract with the distribution company and on any work to be carried out on the installations, where necessary. The supply start date is the first day of the stipulated metering period indicated in the first bill.

The contract may be extended for successive annual periods in accordance with the General Terms and Conditions.

## Taxes

The monthly rental price for the electricity meter is established by the Ministry of Industry, Tourism and Trade for the corresponding access tariff, and charged by the distribution company. VAT(\*) is added to this price, and stated on bills issued to customers. The Customer may check current prices at any time at [www.iberdrola.es](http://www.iberdrola.es).

(\*) CPI: Real cumulative cost during the November to November period prior to the variation in the Consumer Price Index, general, published by the Instituto Nacional de Estadística (National Institute of Statistics).

(\*\*) The taxes applicable at all times and that will be broken down on the bill will be: for electricity supply, the Electricity tax (2,5% or the minimum amount of €0.5/MWh or €1/MWh or as applicable by law) and for gas supply, the hydrocarbon tax (€0.00234/kWh or as applicable by law). In addition, VAT is applied in mainland Spain and the Balearic Islands (21% or 10% or as applicable), IGIC (0%, 3% or 7% or as applicable) is applied in the Canary Islands and IPSI (1% or 4% or as applicable) is applied in Ceuta and Melilla. Insurance includes taxes (IPS), the Insurance Compensation Consortium surcharge and brokerage fees, which are not subject to VAT.
